

Cryo EM user forum 2021

Dear cryo EM community,

This year's cryo-EM user forum will happen at the 7th and 8th September 2021. As the meeting situation is unclear, the user forum will be held online.

In the program you can find the detailed planning. Let me comment on some of the points.

Pre-course

At the first day, we offer an introduction to cryo EM if this is asked for. If you are interested in this introduction, announce this in the registration email.

Who am I

Present yourself by answering the given questions in a short "chalk talk" on Mural. You can bring a picture or draw something on your specified whiteboard area on the mural board in advance.

Success stories

I am very happy that I could win a guest speaker who will talk about a successful cryo-EM story. Not only the nice things but also the pit falls.

Poster session

There will be 2 poster sessions on Gathertown. This is virtual meeting room. You can already enter it and have a look!

It would be great if many of you would present a poster about their projects there. If you are willing to present a poster, announce this in the registration email. This is a great chance to practice poster creation and presentation in a small round. Take the chance!

Project work

On the second day, the major focus is on project work. The idea is to form small groups, that can intensively discuss about a specific topic concerning the cryo-EM community in cologne. Find examples in the program. If you have other interesting topics that could be discussed, just announce your suggestions in the registration email or present them during the user forum.

Please write me a registration email to strubitem-contact@uni-koeln.de containing the following information:

- I want to participate/or not
- I am interested in the pre-course
- I want to present a poster/or not
- Suggestions for the project work

I would be very happy to see you at this years user forum.

Best, Monika Gunkel
